React: Api Request

React – Chuck Norris

The following exercise contains the following subjects:

◆ Api requests

Instructions

We want to use this API (https://api.chucknorris.io/) to get awesome Chuck Norris jokes.

Basic requirements:

1) Get a random joke each time you click on a button and display the joke on the screen.

2) Display different joke categories on the screen.

When the user click's on a specific category, display a joke from that specific category.

Ninja

1) Dynamically get all the categories from the API and display them on the screen.

2) Have a search input that will show a list of jokes depending on the query you give it.

Submit the file to Hive.
