React: Hooks

React – marking and deleting

The following exercise contains the following subjects:

- useState
- controlled check box

Instructions

You are given this array:

```
["one", "two", "three", "four", "five"];
```

1. Create 5 check boxes in a list.

2. Each check box should have its relevant text from the array.

3. Your check boxes need to be controlled by React.

4. When you check the check boxes you can remove them from your app by clicking on a delete button.

5. You are able to reset your check boxes to become un checked and all the check boxes you previously removed need to reappear again.
